Electric Fencing Products

Fencing bracket offset - double

Double offset brackets are used when the earth conditions are bad, this allows the bracket to carry both a live (hot) wire and an earth wire to where it is needed. By utilising the strength and rigidity of an existing fence it will thus reduce the costs of the electric fence system. They are generally used for animal control and are available in 4mm galvanised high tensile steel. These offset brackets can be used with the porcelain and or plastic insulator.

Feature:
• Heavy duty design
• Double offset or also known as a live and earth wire offset bracket.

Supplied without the porcelain or plastic insulator

Specifications:

Size: Available in 225mm offset and 350mm.
Material: 4mm high tensile steel.
Finish: Galvanised
